TeamDirection Project for Microsoft SharePoint®

TeamDirection Project for SharePoint enables everyone on your team to collaborate using the Microsoft SharePoint platform. Designed for people with no specialized training in project management, TeamDirection Project increases team productivity by bringing the project team and the latest information together in a virtual workplace. The project schedule and assignments are visible at all times – even offline – so everyone knows what to do and when. Built-in messaging allows issues to be resolved on-the-fly, improving quality while maintaining momentum. And you save money by leveraging SharePoint either in-house or hosted!

Product Highlights

TeamDirection Project is a participatory project tool that fosters greater engagement and productivity among distributed or co-located teams. Everyone contributes to the project plan, reporting progress on their assigned tasks, linking information such as files or discussion topics directly to tasks, and resolving issues by communicating with others in the project workspace.

Users select projects in the Organizer—then work with a specific project in the Viewer

Install, click, and go! Invite members from within or external to your organization by e-mail. Recipients simply click and install to join your project.

Rapidly create projects using a template, or enter data directly into the task grid. Invite team members. Link to essential information.

Team members will see their assigned tasks in the project context, access supporting information, and update their progress using the graphical interface.

Easy-to-use interface. Easily create a task hierarchy, drag tasks to desired dates on the timeline, establish dependencies, assign resources and create milestones.

Assign resources to tasks. Assign resources from SharePoint workspace members or other custom roles you create.

Report progress. Members update their assigned tasks with percent completion. Color is used to indicate status.

Provide important information regarding specific tasks or milestones by linking needed files to tasks. Electronic deliverables can be viewed by everyone in the workspace.

Leverage Microsoft Project. Use an existing MS project to populate your plan, or export to an mpp file to create standard reports.

Stay in sync automatically. Everyone sees the same project schedule, synchronized at regular intervals or on-demand. Unread markers alert members to new or changed information.

Import-Export. Export your projects in TeamDirection backup format for later re-use as templates.

Connect and communicate using the tools you already have. Embedded Windows Messenger allows you to resolve issues in real time or schedule meetings as required.

TeamDirection Project for Microsoft SharePoint®

The screenshot displays the TeamDirection Project software interface. The main window shows a Gantt chart for a project titled "TeamDirection Marketing - TeamDirection Project" for May 2006. A task list on the left shows 27 tasks with columns for Name, Duration, % Complete, and Assigned. A "Project Organizer" window is open in the foreground, showing a tree view of project folders and a list of actions like "Get Started", "Create a Project", and "Synchronize Folder Contents". A "Members" pane on the right lists online and not online users.

Product Highlights

- Users organize and access their SharePoint based projects from the desktop using the Project Organizer
- Data is stored locally and can be accessed offline
- People connect in real time using the Member Pane

System Requirements

MS Windows 2000/XP
